

SOICHI TAMASHIRO

Technical Project Manager | Engineering Manager

Lima, Peru (UTC-5 — ~4h daily overlap with CET) · soichi.tamashiro@gmail.com · soichi-tamashiro.github.io
linkedin.com/in/soichi-tamashiro · Open to contractor engagements with EU companies (B2B invoicing)

PROFILE

Technical Project Manager with 10+ years across software delivery, legacy modernization, and engineering leadership, and an MEng in Systems Engineering. Hire, lead, and mentor a 10-person cross-functional team and plan a portfolio of 15+ academic systems at Universidad Ricardo Palma (15,000+ students, faculty & staff), directing Campus URP — the university's core academic platform — from requirements and architecture through CI/CD, cloud (AWS/GCP) and on-premise deployment, to production support, compliance, and national accreditation. Co-founded Motorongo (Startup Perú 2023 winner), architecting its backend, database, and Android apps. Hands-on backend engineer (Python, Java, Node) turned delivery leader; IEEE-published researcher with three projects featured in national media. Remote experience on distributed teams with Spain and Colombia; English C1. Available as an independent contractor on EU hours (~4h daily CET overlap, meetings until 19:00 CET); short engagement-start lead time.

EXPERIENCE

Technical Project Manager (Engineering Manager scope)

Aug 2023 – Present | Lima, Peru

· Universidad Ricardo Palma

- **Direct Campus URP (formerly Yachayhuasi), the university's core academic platform** — curricula, courses, faculty and administrative staff, lective/non-lective workload, schedules, classrooms, and reporting across undergraduate, postgraduate, master's, specialties, and medical residency — serving a 15,000+ community across 8 faculties; featured in El Comercio. Backend analyst on the original build, promoted to TPM post-launch to lead the platform's consolidation and expansion.
- **Led the platform's complete rework, owning requirements and architecture**, replacing the 20-year-old legacy system; reduced administrative workload 50% and improved task-completion times ~300%, eliminating the emergency committees previously required to start each academic cycle.
- **Delivered three core systems now in production**: a university-wide evaluations system (automated grade validation, three-level approval workflow, full audit trail — Java 17/Spring Boot, React, SQL Server, OAuth 2.0/JWT, AES-256, GDPR-aligned); the undergraduate medicine hospital-program system (hybrid university/hospital schedules, rotations, supervising-physician allocation, and program-specific grading; subject to national health-education legislation); and an on-premise AI assistant (RAG over locally served LLMs, Java/Spring, PostgreSQL + pgvector, role-based authorization, tamper-evident auditing — no data leaves university infrastructure).
- **Led Campus URP's authentication and access-management system**; currently leading the migration to a Keycloak-based IAM platform, owning role, permission, and resource design.
- **Hire, lead, and mentor a 10-person mixed-seniority team** (full-stack, frontend, backend, DBA/data, UI/UX, DevOps) in backend, Android, and applied AI — including a developer who progressed to independently delivering the AI assistant above.
- **Manage budgets across the function**: role-based hiring budgets for the team, app-store and DUNS operating costs, third-party integrations, and AI/LLM initiatives — including preparing and defending budget cases before the university's budget office.
- **Cut delivery times up to 80%** with a per-project hybrid framework (Agile sprints, design thinking, waterfall gates); coordinate cloud (AWS/GCP) and on-premise infrastructure, CI/CD and releases, and migration of applications to the new datacenter; run sprints, retros, roadmaps, and executive stakeholder reporting used for contract renewals.

Senior Analyst · Universidad Ricardo Palma

Nov 2022 – Aug 2023 | Lima, Peru

- **Reduced load times by 90%** on systems serving student and academic-cycle data by replacing legacy backends with modern technologies.
- Partnered with UI/UX on a full interface revamp that increased user engagement by 30%.

Co-Founder & CTO · Motorongo (formerly Terabike)

Nov 2022 – Present | Pucallpa, Peru

- **Winner of Startup Perú 2023** (ProInnovate, Ministry of Production). Green-mobility ride-hailing platform for the Peruvian Amazon that funds reforestation with each trip; separate passenger and driver Android apps on Google Play.
- Architected the backend, database, and Android applications; built the product 0→1 and led 3 engineers.

Backend Developer · Nirex — logistics platform

Aug 2021 – Nov 2022 | Remote

- Remote (EU/LATAM distributed team) — lead in Colombia, peers in Spain and Peru.
- Integrated MercadoPago payment processing into the platform; built a new service type end-to-end — subscription-tier-based shipping logic surfaced in the driver app (Kotlin), mentored by the senior Android developer.

Developer · Robotic Air Systems

May 2019 – Jan 2021 | Lima, Peru

- **Reduced data pre-processing time by 99%** by building an automated geotagging system for aerial photography, replacing a fully manual workflow.

R&D Researcher · ELOGIC — Tecnologías de Radiodifusión del Perú

Mar 2016 – May 2019 | Lima, Peru

- Co-developed HIRO, the first tsunami early-warning receiver made in Peru (EWBS broadcast signal; joint ELOGIC–PUCP project funded by Innóvate Perú, Ministry of Production), able to alert up to 20 minutes before coastal impact; published in IEEE Xplore and covered by El Comercio.
- Prototyped on embedded platforms (Raspberry Pi, ARM, Arduino) bridging broadcast engineering and software.

Earlier roles (2014–2016): technical support engineering and small-business management.

INDEPENDENT CONSULTING & PROJECTS (2020 – 2021, CONCURRENT WITH ROLES ABOVE)

INSPIRA — health-tech consulting (Jan–Jul 2020): led a 3-person team building a respiratory-monitoring solution (Bluetooth device, mobile app, admin panel) with biomedical research groups at Univ. Cayetano Heredia and PUCP; supported the researchers' publications, remains active and publicly featured by UPCH (2025).

RiverPharma (Aug–Dec 2020): pharma distribution system — web frontend + backend + Flutter delivery app (Heroku).

AlphaLytics (Jan–Apr 2021): serverless authentication service with automated email verification (GCP Cloud Run).

Zeus Maritime (May–Jul 2021; ongoing advisory): technical consultant for a state-grant-funded ERP — vendor contract/scope advisory alongside legal; ongoing deliverable reviews.

TECHNICAL SKILLS

Backend: Python (Django, FastAPI), Java 17/21 (Spring Boot), Node.js (Express)

Frontend & Mobile: React, JavaScript; Flutter/Dart, Kotlin (Android)

Data & Messaging: PostgreSQL, MySQL, SQL Server, MongoDB; Kafka, RabbitMQ

Cloud & DevOps: AWS, GCP (deployments, CI/CD pipelines, production troubleshooting); Azure DevOps; Keycloak (IAM); Grafana, Prometheus; Linux administration, Bash, systemd; Git (GitHub, GitLab incl. self-hosted, Bitbucket)

Project Management: Jira, Azure DevOps, ClickUp, Trello, OpenProject (self-hosted); Agile/Scrum, hybrid delivery, PlantUML process mapping, stakeholder reporting
